

FLUID & SPRAY - WET LINE

To protect oral mucosa

PRODUCT DESCRIPTION

WET LINE is an innovative health care line product representing a new use of the low molecular weight Hyaluronic Acid [patented]. This polysaccharide is found in body tissues, in which it performs many different fundamental biological functions and through which, thanks to its film-forming and protective properties, it achieves a safer, natural cell regeneration process in case of changes in the oral mucosa.

Its mechanism of action is to recover the integrity of the epithelial tissue of the oral cavity [oral mucosa], by using very low viscosity, low molecular weight hyaluronic acid that performs protective activity thanks to its film-forming capacity.

INDICATIONS

WET LINE is indicated:

- In a preventive capacity, to preserve the integrity of the oral mucosa.
- In a protective capacity, to enhance the physiological process to repair lesions in the gums and oral mucosa, whatever their origin: dental procedures such as the removal of plaque, fixed and removable braces; lesions with various causes [infective, traumatic, pharmacological] of the oral mucosa and gums in particular.

THE ACTIVE INGREDIENTS

HYALURONIC ACID [patented] the low molecular weight is indicated in the tissue repair process. The innovation of this special type of hyaluronic acid is that, thanks to its physical characteristics, provides greater efficacy in process to repair damaged or wounded mucosa.
Paraben free, alcohol free.

INSTRUCTIONS FOR USE

- 1) Mouthwash: rinse mouth with 5-10 ml of product.
- 2) Apply at least 3 times a day to maintain the protective film throughout the day.
- 3) It is recommended to apply the product after meals and oral hygiene.
- 4) Oral gingival fluid is harmless if accidentally ingested.

PRESENTATION

- Mouthwash: 150 ml-250 ml.
- Spray: 30 ml.

PRODUCT CATEGORY

Medical Device class IIa.
