

## TEETHING GEL

### PRODUCT DESCRIPTION

**TEETHING GEL** provides relief by reducing discomfort before and during teething phase of early childhood.

The gel forms a mucoadhesive film that protects and refreshes gums giving relief during the emergence of the newborn's first teeth.

### ACTIVE INGREDIENTS

**CALENDULA EXTRACT:** Carotenes, flavonoids and essential oils protect the skin against external aggressions. Known for its lenitive properties. Helps reduce discomfort associated with emergence of baby teeth.

**TAMARINDUS INDICA SEED POLYSACCHARIDE:** Highly moisturizing polysaccharide extracted from tamarind seeds. Forms a protective film over the gums.

**XYLITOL:** The xylitol helps forms a bio adherent film that acts as a protective barrier, lubricating, hydrating and cooling the oral mucosa on contact. Xylitol possesses known anti-tooth-decay properties (85% reduction in risk of tooth decay), cures and reduces the risk of candida, and lowers the risk of allergies and infections that can occur during the infant's teething process.

**XANTHAN GUM:** Strongly mucoadhesive ingredient, granting the product its characteristic mucoadhesiveness and viscosity.

### INSTRUCTIONS FOR USE

After washing hands thoroughly, apply enough of the product to the affected area, massaging gently. Use as needed, preferably after meals to allow proper formation and permanence of the protective film.

The gel can be kept in the refrigerator to give a cooling effect upon application.

### PRESENTATION

1 tube containing 15 ml of gel.

### PRODUCT CATEGORY

Medical device IIa.
