

UTI MANAGEMENT LINE

PRODUCT DESCRIPTION

UTI MANAGEMENT LINE is a complete product line for UTIs management for reducing the symptoms and the relapses, based on different approaches:

- Microbiota characteristics [gender]. Different male and female microbiota.
- Effect [prevention, acute or relapses].
- Symptoms intensity.

RANGE OF PRODUCTS

FEMALE SPECIFIC PROBIOTIC PRODUCT: action on intestinal and vaginal microbiota to have the right balance and protection against the migration of bacteria from intestinal/vaginal area to the urethra. With Lady SynBalance.*

MALE SPECIFIC PROBIOTIC PRODUCT: action on intestinal microbiota to have the right balance and protection of the immune intestinal system. Support men's urinary tract health. With Prostabioime SynBalance.*

*Scientific studies.

ACUTE PHASE PRODUCT: reduces the symptoms of acute UTI's by interfering with bacteria adhering to the urinary epithelium with ingredients well tolerated.

RELAPSES PREVENTION PRODUCT: lows the risk or the intensity of UTIs relapses by interfering with bacteria adhering to the urinary epithelium with ingredients well tolerated.

THE ACTIVE INGREDIENTS

LADY SynBALANCE^[1]: *Lactobacillus acidophilus*-PBS066 and *Lactobacillus reuteri*-PBS072. Adhesion and colonization from oral intake as well as other proximal sites.

PROSTABIOME SynBALANCE^[2]: *Lactobacillus fermentum* PBS073, *Lactobacillus gasser* LG050 and *Bifidobacterium animalis subsp. lactis* BL 050.

BEARBERRY DRY EXTRACT std. in arbutin^[3]: antibacterial activity due to the metabolite hydroquinone which is excreted in the form of inactive conjugates and needs an alkaline urine to be liberated.

PHYLLANTUS NIRURI DRY EXTRACT std. in tannins^[3]: diuretic action that could help the excretion of bacteria.

MYRRHA DRY EXTRACT^[3]: reduces the pain and inflammation.

SODIUM CARBONATE^[3]: contributes to high urinary pH [inflammation makes it more acidic].

D-MANNOSE^[3,4]: interferes with bacteria adhering to the urinary epithelium.

VITAMIN B3^[3,4]: contributes to normal mucous membrane.

ZINC^[3,4]: contributes to normal acid-base metabolism and normal function of the immune system. It has a positive effect in ameliorating severe dysuria and urinary frequency.

UTI MANAGEMENT LINE

THE ACTIVE INGREDIENTS

CRANBERRY DRY EXTRACT [std.in proanthocyanidin (PAC)]^[4]: reduce the recurrence rates over 1 year are significantly reduced.

VITAMIN C^[4]: contributes to the normal function of the immune system. Anti-biofilm effect.
