

EYE CONTOUR HYDROGEL PATCH

□ PRODUCT DESCRIPTION

Eye contour hydrogel patch is a cosmetic product that, thanks to its vegetable extracts, is particularly indicated as an adjunctive treatment for under-eye bags. It is a patch composed of a TNT [non-woven fabric] film on which a hydrogel is extended containing the cosmetic ingredients responsible for its action.

□ MECHANISM OF ACTION

The **hydrogel technology**, allows the release of the active components to be modulated, thereby achieving levels of absorption and release times that are much higher than those obtained with traditional topical methods [creams, lotions, gels, pastes and ointments].

Thanks to the technology's own osmotic effect, part of the water remaining in contact with the skin evaporates due to body temperature, giving a pleasant feeling of freshness while helping maintain the skin's hydration. Its effects are immediate after application, visibly improving the skin after use.

□ INDICATIONS

Eye contour hydrogel patches can be prepared for almost any cosmetic requirements, including:

- Moisturising hydrogel patch.
- Regenerative hydrogel patch.
- Lifting effect hydrogel patch.

Eye bags, scientifically called dermatocalasi, consist of a drop in the lower eyelid skin, which, on losing elasticity, Eye bags is supported on the bone because of gravity.

These eye bags involve serious aesthetic damage, and can be associated with other defects [dark circles, vascularisation defects...], with hernias even being detected in adipose tissue.

□ THE ACTIVE INGREDIENTS

Regenerative hydrogel patch thanks to its draining, cooling and soothing ingredients, it decreases oedema and, in combination with firming active ingredients, achieves a lifting effect.

MANILKARA MULTINERVIS EXTRACT is an extract of the leaves that contains flavonoids and tannins. Helping to protect against the effects of elastase, increasing the synthesis of proteins associated to elastin, improving the firmness and elasticity of the skin.

HYDROLYZED ELASTINE helps to regenerate the skin and prevent premature loss of elasticity.

EYE CONTOUR HYDROGEL PATCH

CENTELLA ASIATICA draining and decongestant action, it considerably reduces puffiness in eyelids and eye bags.

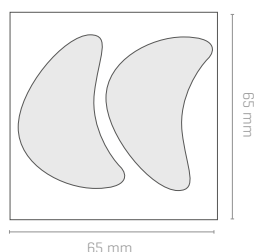

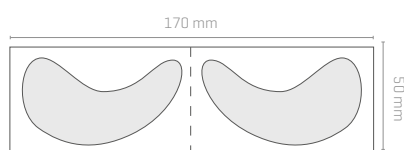

SUPEROXIDE DISMUTASE is a naturally occurring enzyme which provides a defence against oxidant injury. It acts as a neutralizer of free radicals, protecting the skin. Softens the skin and helps to combat the signs of photo-aging, makes the skin looks healthy, radiant and translucent.

INSTRUCTIONS FOR USE

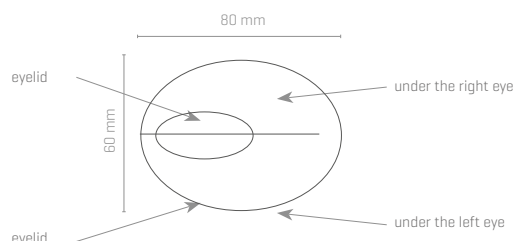

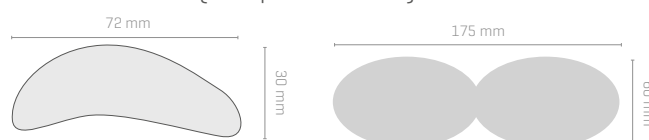

- 1] Prepare the skin so it is clean and dry. Cut the foil sachet and remove the product from the sachet. The product is composed of 2 patches (1 for each eye).
- 2] Separate the patches from the protective film and apply 1 patch under each eye.
- 3] Leave on for 20-25 minutes, remove and continue with your regular beauty routine. Does not require rinsing. Does not mark or stain.
- 4] It can be applied at any time of the day, and reapplied when deemed appropriate. The hydrogel flash effect achieves results immediately after application, noticeably improving the appearance of the eyes.
- 5] Treatment: 2/3 applications each week, for 1 month.
